PROFESSIONAL SUMMARY

Final-year Computer Science student specialising in cyber security and AI-driven threat detection. Experienced in building SOC simulations, malware classification systems, and cloud-based monitoring infrastructure. Strong foundation in Python, Linux, and security analytics.

EDUCATION

Liverpool Hope University <i>Bachelor of Arts in Computer Science - working towards a high First class</i>	Liverpool 2023 – 2026
George Spencer Academy <i>A-Levels in History, Psychology, Biology; AS in Advanced Mathematics</i>	Nottingham 2021 - 2023

PROJECTS

Agentic SOC Dashboard <i>Node.js, JavaScript, Github</i> - Developed a full-stack cybersecurity simulation and real-time dashboard using Node.js - Utilised GitHub for version control and project tracking - Designed the system to function as an "agentic" environment for monitoring and reacting to simulated threats.	January 2026
Explainable AI (XAI) Malware Detector <i>Python, TensorFlow, Jupyter, SHAP</i> - Trained deep neural networks to recognise fileless malware (99% accurate) based on complex memory dumps. - Implemented Explainable AI (XAI) principles to ensure model decisions are transparent and auditable for security analysts. - Utilised TensorFlow to bridge the gap between high-performance machine learning models and web-based interfaces.	January 2026
Semi-Supervised Ransomware Threat Engine <i>Python, Network Security</i> - Engineered a semi-supervised AI model designed to detect (99% accurate) active ransomware attacks by analysing network data patterns. - Optimised the model to identify anomalies in traffic, providing early warning signals for security-critical systems.	January 2026
Cloud-Based IoT Monitoring System <i>JavaScript, AWS, MongoDB</i> - Built a full-stack IoT system to monitor environmental factors like humidity and temperature in real-time. - Deployed the infrastructure on AWS, utilising API requests to fetch and store data in a MongoDB database. - Developed a web service frontend to visualise sensor data for end-users.	January 2026

TECHNICAL SKILLS

Proficient Languages: C#, Python, JavaScript, C++, C, PHP, Java, SQL (MySQL, PostgreSQL), Kotlin
Familiar Languages: C++, C, PHP, Java, SQL (MySQL, PostgreSQL), Kotlin
Frameworks: Node.js, React.js, TensorFlow.js, HTML5/CSS3
Developer Tools: Git / GitHub, Linux (Ubuntu/Mint), AWS, VS Code, Visual Studio, IntelliJ and Android Studio.
Libraries: pandas, scikit-learn, NumPy, Matplotlib, MongoDB, MySQL, PostgreSQL

EXPERIENCE

Shift Leader at Tesco - Lead shifts in a high-volume retail environment, supervising team members and ensuring operational continuity. - Developed strong communication, incident resolution, and prioritisation skills under time pressure.	2021 – Present
Freelance Database Integration Specialist Supported small-scale database integration and migration tasks across SQL environments. Assisted with schema design, query optimisation, and access control configuration. Applied best practices in data integrity and performance tuning.	2025 – Present
